1. Executive Summary

The 'Loan Application expert' project aims to streamline the SME lending process by integrating robust KYC verification, risk management, and audit capabilities, ensuring compliance and operational efficiency.

2. Project Objectives

1. Ensure secure and compliant customer application submissions.
2. Automate detection of document discrepancies to minimize manual errors.
3. Implement risk management protocols for high-value applications.
4. Provide comprehensive audit trails for all application processes.
5. Facilitate seamless user authentication through SSO integration.

3. Scope Description

In-Scope Items:

- KYC document verification and submission process.
- Name mismatch detection between GST certificates and bank statements.
- Risk approval workflow for high-value applications.
- Audit history tracking for all reviewer actions.
- Integration with Google and Microsoft SSO.

Out-of-Scope Items:

- Development of new lending products.
- Integration with non-specified third-party services.

4. Key Stakeholders

- Product Council
- Risk Office
- Operations
- Legal
- Compliance

5. Functional Requirements

ID	Title	Description	Source	Meta
FR-001	Customer Application Submission	Customers must upload mandatory KYC documents before submitting applications.	securepay_stakeholder_memo.docx	Conf: LOW Pri: MUST HAVE
FR-002	Name Mismatch Detection	System must flag name mismatches between GST certificates and bank statements.	securepay_stakeholder_memo.docx	Conf: HIGH Pri: MUST HAVE
FR-003	Risk Approval for High-Value Applications	Applications above INR 25 lakh require risk approver approval before offer generation.	securepay_stakeholder_memo.docx	Conf: HIGH Pri: MUST HAVE
FR-004	Audit History Visibility	All reviewer actions and document downloads must be recorded in audit history.	securepay_stakeholder_memo.docx	Conf: MEDIUM Pri: MUST HAVE
FR-005	BRD Generation Requirements	Generated BRD must include source trace and confidence for each requirement.	securepay_stakeholder_memo.docx	Conf: HIGH Pri: SHOULD HAVE

6. Non-Functional Requirements

ID	Title	Description	Source	Confidence
NFR-001	Document Retention	Documents must be retained for seven years with immutable audit logs.	securepay_stakeholder_memo.docx	HIGH
NFR-002	SSO Integration	SSO integration must be completed with Google and Microsoft before implementation.	securepay_stakeholder_memo.docx	MEDIUM
NFR-003	System Performance	The system must handle peak loads without performance degradation.	inferred	LOW

7. Assumptions & Dependencies

- SSO vendor review will be completed before implementation.
- Customer notifications will be triggered by specific events.

8. Risks & Mitigations

Risk Element	Suggested Mitigation Strategy
Delay in SSO vendor review could impact project timeline.	Engage vendors early and establish clear timelines.
Non-compliance with document retention policies.	Regular audits and compliance checks.

9. Acceptance Criteria

- All functional requirements are implemented and tested successfully.
- Audit logs are immutable and accessible for seven years.
- SSO integration is fully operational with Google and Microsoft.
